DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- a. Each azole derivative of formula (I) recited by claims 1-2.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. Specifically, as to claims 1-2, Applicant is required to define each of A, R, R', X and any additional variables as required for a particular species (a species for example is methyl, NOT alkyl). Upon Applicant's election of species, the result must provide a single chemical species. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner: claim 2. The following claim(s) are generic: 1 and 3.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: each chemical species is a distinct chemical which lacks a special technical feature in view of *Dickinson et al* (US 5,116,844) in further view of *Kim et al* (US 6,552,080 B1). *Dickinson et al* teach a triazole antifungal agent (abstract). Where A of the instant application is O, *Dickinson et al* teach the instant compound except that the triazole antifungal agent of *Dickinson et al* does not contain fluorovinyl as recited by instant claim 1. *Kim et al* teach an antifungal compound characterized by containing a fluorovinyl moiety (abstract). Specifically, *Kim et al* teach that the fluorovinyl-containing compound has "broad fungicidal activity spectrum against the target fungi when compared with the control compounds, such as ORIBRIGHT™" (Column 57, Lines 53-56) which, albeit structurally similar to the fluorovinyl-containing compound of *Kim et al*, does not contain a fluorovinyl moiety. Thus, based on *Kim et al*, it would have been obvious to one of ordinary skill in the art to insert a fluorovinyl moiety into the triazole antifungal agent of *Dickinson et al*. As such, instant azole derivatives of instant claims 1-3 do not share a special technical feature.

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
